NEWS RELEASE - FOR IMMEDIATE RELEASE

BH Global's cyber security division enters into strategic partnership with Sasa-Software (Israel)

- **Strategic partnership will see the formation of Sasa-Software's regional APAC headquarter in Singapore ("Sasa-APAC")**
- **Provides further opportunities to expand the reach of Sasa-Software's proven Content Dis-arm and Re-construction (CDR) Technologies, aiding the protection of Critical Info-Infrastructures (CIIs) and Separated Secured Networks in the APAC region**

Singapore, 30 January 2019 - BH Global Corporation Limited ("BH Global"，"明辉环球企业" or the "Group"), an established group providing comprehensive solutions in supply chain management, design and manufacturing, engineering, and surveillance and cyber security to a multitude of industries across the globe, is pleased to announce that the Group has entered into a strategic partnership with Sasa-Software (Israel).

Sasa-software (Israel), an Israeli company based out of Kibbutz Sasa in the Upper Galilee, is an award-winning, pioneer and specialist in CDR technologies. Since 2009, the company has protected more than 200 highly sensitive and critical sites, achieving virtually zero incidents.

Based out of Singapore, and as an extended arm of Sasa-Software (Israel), Sasa-APAC will expand its businesses and proliferate CDR technologies into the region by establishing viable regional channel partners. Sasa-APAC will qualify, appoint and train its channel partners with skill sets to adequately service the needs of their local customers, especially CII customers and customer who are in pursuit of network separation implementations.

"As high-profile breaches continue to make headlines globally and now even at home, such as the Singhealth data leak, this is a timely and strategic partnership in response to the global deficiency in mainly detection based cyber security strategies. It is especially so when threat vectors today are not just highly sophisticated in depth, but also expanding rapidly in breath from attacking enterprise IT systems to CIIs such as Operational Technologies (OT) and Supervisory Control And Data Acquisition (SCADA) platforms in

Industrial Control Systems. Sasa-APAC will benefit CIIs in the region directly through increased accessibility to CDR realisation skills and experiences. With that, we hope to change the common detection-centric mindset in most cyber-protection strategies today", said **Mr Ken Soh, Chief Information Officer, BH Global and Chief Executive Officer, Athena Dynamics Pte Ltd ("ADPL")**.

ADPL and Sasa-Software have been in collaboration since 2014, successfully deploying the latter's flagship CDR technologies, protecting numerous critical networks of public and private sectors, including government agencies, financial institutions, healthcare and critical infrastructures. The formation of Sasa-APAC will take this relationship a step further, assuming the role as the face of Sasa-Software (Israel) in the APAC region.

"As a pioneer of CDR technology, Sasa-Software today is protecting more than 200 CIIs including government classified networks, military, water, energy plants, healthcare and FSI sensitive infra-structures since 2009. Sasa-APAC will therefore be a strategic and practical platform for us to introduce and proliferate this unique cyber protection technology to the Asia Pacific region. Sasa-APAC today is well equipped with engineers trained and certified by Sasa-Software, who come with extensive production experiences in Singapore. We are ready to serve and provide quality CDR solutions to the APAC region", said **Yakov Yeroslav, Founder and CEO, Sasa-Software.**

ABOUT SASA-SOFTWARE

Situated in northern Israel and privately owned by Kibbutz Sasa, Sasa-Software's solutions were originally developed within Plasan and Kibbutz Sasa's networks. This success enabled Sasa-Software to release its products nationally and internationally and today Sasa-Software protects over 200 sensitive and critical sites with virtually zero incident since 2009.

Sasa-Software's solutions have been tested by independent authorities specializing in IT security. Sasa Software's Gate Scanner® suite of solutions have been recognized by independent market analyst Frost & Sullivan as the Asia Pacific ICT (Critical Infrastructures) security vendor of the year for 2017. It was also ranked by independent research body STKI as the only pioneer and out-running champion of CDR technologies.
